

This Guide is for the assembly of two separate products, the Small Catapult and the Ballista.

Small Catapult stands 65mm long, 30mm wide and 30mm tall.

Ballista stands 35mm long, 25mm wide, and 25mm tall.

Part number **DEAL-20035 Ballista** and **DEAL-20036 Small Catapult** found in store shopping cart, category "FANTASY Scenery".

www.MegaMinis.com

Tools you will need:

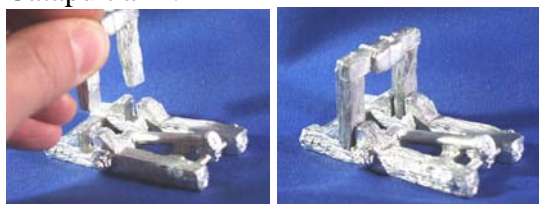

The two primary tools you will need are super glue and a razor blade. The razor blade is good for cutting off burs on the metal parts that are caused from gating in the casting process.

Other tools I like to have around are some form of needle nose pliers or pliers that have a cutting edge.

Insta-set is an accelerator spray that when applied to an area with super glue, makes the glue harden within seconds. It is nice to have if you plan on putting together many models or are pressed for time.

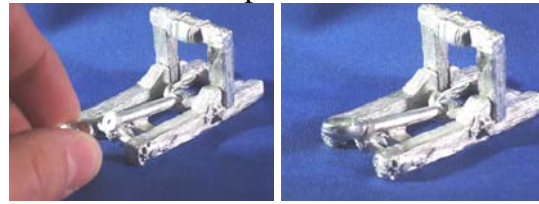

Small Catapult Step One:

Add glue to non textured surface of item 3 and insert into item 1. Be sure that the pillow at the top of item 3 is facing the Catapult arm.

Small Catapult Step Two:

Glue item 2 with curved side upward to the end of the catapult arm on item 1.

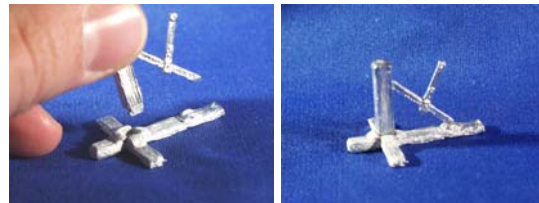

Small Catapult Step Three:

Glue the round cavity on item 4 to the gear on right side of item 1.

Ballista Step One:

Glue item 7 into item 6.

Ballista Step Two:

Glue item 5 on top of the assembled 6 and 7.
